

THE CHALLENGE

To provide both the foundations and floor for a garden room in the back garden of a property, which posed the following challenges:

- ⚙️ Limited access meant the garden could only be reached by going through the house itself.
- ⚙️ A nearby tree made traditional concrete foundations impossible.

THE SOLUTION

After the local contractor had cleared the site, we arrived to carry out the installation of the QuadraPile foundations along with a QuadraBase suspended floor, ready for the construction of a timber-frame garden room.

Our work was completed within

two days and the structure could immediately be erected without needing to wait for concrete to cure.

All parts, including the pile driving equipment, were carried through the property to access the rear garden.

✓ Minimal disruption

✓ Clean, fast, efficient

✓ No mess foundations

✓ Limited access sites
