

### THE CHALLENGE

The need for a fast, clean foundation and floor structure for a garden room, which could be removed at a later date if necessary. The customer requested:

- Minimal disruption and a quick installation.
- Ability to easily remove the structure later if necessary

### THE SOLUTION

We installed QuadraPile helical pile foundations and assembled the insulated QuadraBase modular floor structure on top.

The piling and floor structure were completed in only a few hours.

Timber-frame walls could then

be built straight onto the floor structure to give a weathertight shell in only a couple of days.

Although not required for this job, the whole floor was designed to meet Building Regulation requirements.

✓ Minimal disruption

✓ Clean, fast, efficient

✓ No mess foundations

✓ Limited access sites
