

THE CHALLENGE

To provide the foundations for an extension, where the site posed the following challenges:

- Nearby trees and highly shrinkable clay soil meant that a piled solution was the only viable option.
- The restricted access down a set of steps meant that a system with lightweight, portable equipment was needed.

THE SOLUTION

Installation of a QuadraPile solution with reinforced concrete ground beams was ideal.

All the equipment could be carried down the steps by two operatives without needing any large machinery. Heave protection boards could be

installed to allow the ground to move without affecting the structure of the building.

✓ Minimal disruption

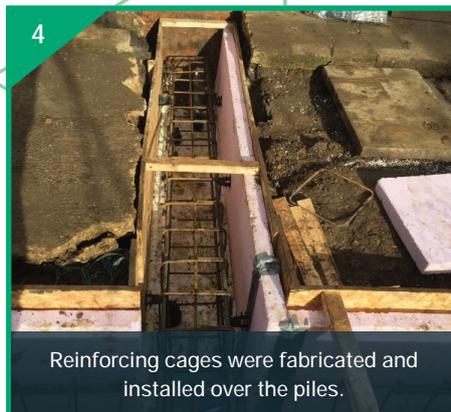

✓ Clean, fast, efficient

✓ No mess foundations

✓ Limited access sites
