

THE CHALLENGE

To provide the foundations for a new lift being installed in the basement of a building undergoing refurbishment. The site posed the following challenges:

- ⚙️ Limited access via an external staircase and through multiple doors prevented the use of any large equipment.
- ⚙️ Disruption had to be minimal as the Private Members club above the site remained open throughout the process.

THE SOLUTION

Alongside the project engineer, we developed a solution using QuadraPile foundations to support a concrete cap at the base of the lift shaft.

available and load tested to ensure suitable capacity.

This solution minimised the disruption and amount of excavation required.

The piles could be installed in the restricted space

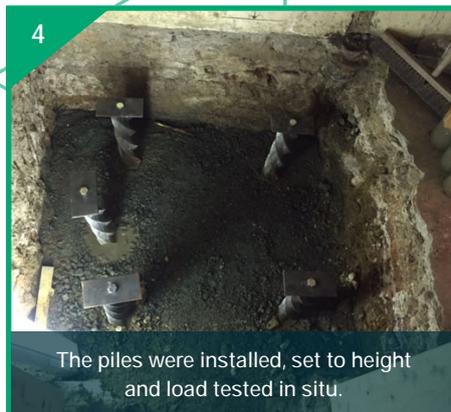

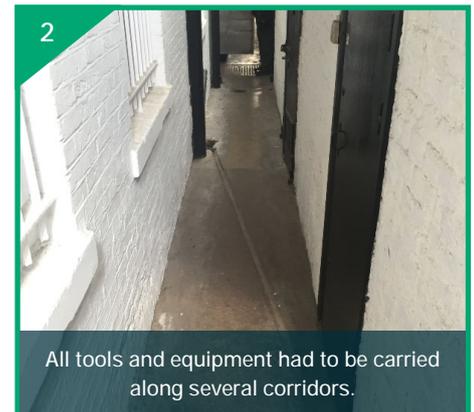

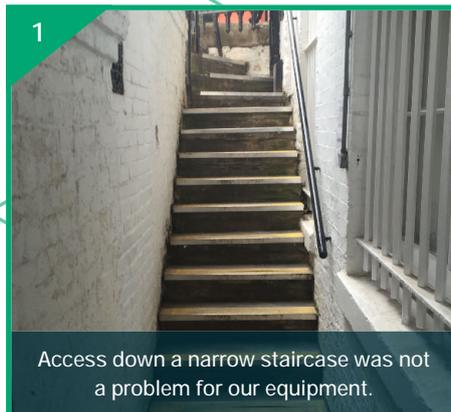

✓ Minimal disruption

✓ Clean, fast, efficient

✓ No mess foundations

✓ Limited access sites
